

Multi-Language Translation

Overview

In today's globalized world, working with a third-party security platform that can provide localization is a powerful way to expand and enable business. Solutions must support different languages and allow you to share security questionnaires with your vendors in their native languages, while providing answers in English. Having this capability also improves communication and leaves less room for misinterpretation.

How does it work?

To enable business globally, Panorays provides the ability to send Smart Questionnaires™ in multiple different languages, based on your needs and target market.

All questions can be sent using your suppliers' native languages, and then the answers can be viewed in English—or in whichever language you choose. When relevant, the entire platform can be localized as well.

The screenshot displays the Panorays user interface. At the top, there are navigation tabs for 'Self Assessment' and 'Dashboards & Reports', and a user profile icon with the email 'my.name@email.com'. Below the navigation, a status bar shows 'Submitted on Jul 26, 2020' and a 'Request to Update' button. A filter bar includes dropdowns for 'Score', 'Question Type', 'Conversations', 'Attachments', and 'Relationships', along with a 'Quick Filters' search icon. The main content area is titled 'QUESTIONS' and shows a question in English: 'J.1 / Is there an established incident management program that has been approved by management, communicated to appropriate constituents and an owner to maintain and review the program?'. The question has three radio button options: 'Yes' (selected), 'No', and 'N/A'. Below the question is a text box with a placeholder: 'Text added by the user will be italic. The text-box can expend if needad. Same length as other single line answers.' and two file upload fields labeled 'filename.doctype' and 'filename2.doctype'. At the bottom of the question, there are tags for 'Important', 'Relationship', and 'Standards'. A second question is partially visible below: 'J.1.1 / Is an Incident / Event Response team available 24x7x365?'. On the right side, a language selection dropdown menu is open, showing the following options: English, 日本語 (JPN), русский (RUS), עברית (HEB), and język polski (POL).

About Panorays

Panorays quickly and easily automates third-party security risk evaluation and management — handling the whole process from inherent to residual risk, remediation and ongoing monitoring. Unlike other solution providers, Panorays combines automated, dynamic security questionnaires with external attack surface assessments and business context to provide organizations with a rapid, accurate view of supplier cyber risk. It is the only such platform that automates, accelerates and scales customers' third-party security evaluation and management process, enabling easy collaboration and communication between companies and suppliers, resulting in efficient and effective risk remediation in alignment with a company's security policies and risk appetite.

The company is offered as a SaaS-based platform and serves enterprise and mid-market customers primarily in North America, the UK and the EU. It has been adopted by leading banking, insurance, financial services and healthcare organizations, among others. Headquartered in New York and Israel, with offices around the world, Panorays is funded by numerous international investors, including Aleph VC, Oak HC/FT, Imperva Co-Founder Amichai Shulman and former CEO of Palo Alto Networks Lane Bess.
