

Get Started with Panorays for Evaluating the Security Posture of Your Subsidiaries

Enterprise companies can sometimes own hundreds of subsidiaries that operate in different locations and time zones. If a data breach occurs at a subsidiary, the parent company is affected as well. Therefore, it's important to effectively assess and monitor the cyber posture of your subsidiaries.

But how? The good news is that Panorays combines automated, dynamic security questionnaires with external attack surface assessments and business context to provide you with a rapid, accurate view of cyber risk within your subsidiaries and their third parties. Panorays then provides remediation planning to close any cyber gaps that are uncovered. Your subsidiaries are monitored continuously and you receive live alerts about any changes in cyber risk.

Panorays provides you with the ability to quickly and effectively evaluate your subsidiaries. **Let's take a closer look!**

360° Ratings

Panorays performs a non-invasive assessment of your subsidiaries' digital assets, much like the way a hacker would perform reconnaissance on a possible target. This includes performing hundreds of tests, such as collecting information on exposed assets or checking the lack of security best practices. Tests are performed to assess network & IT, application and human layers, including checking web, email and DNS servers, web applications and employees' social posture. At the same time, Panorays manages automated security questionnaires that consider whether your subsidiaries are in alignment with your internal security controls, regulations and risk appetite.

Automated Questionnaires

Panorays' automated, easy-to-customize security questionnaires include only the questions that are relevant for each subsidiary (in the language they require). You can easily adjust question scoring according to your internal policies and standards and easily track progress. You'll receive rapid responses from subsidiaries and can easily verify when inquiries have been completed and cyber gaps have been remediated.

Compliance

The Panorays platform works with your subsidiaries so that you can be assured that they adhere to regulations and standards such as GDPR, CCPA and NYDFS, among others. Quickly evaluate your subsidiaries' readiness for regulations and determine what steps need to be taken to fully comply. That way, you'll always be ready for external audits.

Supplier Communication

Engagement

As the only solution that enables in-platform engagement, Panorays eliminates the friction between companies and their subsidiaries, enabling communication, collaboration and remediation. With Panorays, both companies and their subsidiaries can easily dispute or validate findings and report progress towards mitigating cyber gaps on the same platform. With this level of engagement, there are no more false positives, no more unclear answers and no more misunderstandings.

The screenshot displays a user interface for 'Supplier Communication'. On the left, a vertical list of six items is shown, each with a checkbox and a horizontal line. The second item from the top has a dashed arrow pointing to a message bubble on the right. The message bubble contains the text: 'Mandy Smith (Robotics AI). 29 minutes ago' followed by 'A request has been made by the evaluator about this questionnaire.' Below the message bubble, there is a section titled 'Messages' containing a text input field with the placeholder text 'Type a message' and a dark blue 'Add' button at the bottom right.

Continuous Monitoring

The cyber world is constantly changing. New vulnerabilities are introduced constantly, and companies routinely add new solutions and software that could affect their cyber posture. For this reason, Panorays continuously monitors your subsidiaries and sends you live alerts about any changes to their security.

Would you like to experience the power of Panorays to manage your subsidiaries' security posture?
