

Start Your Journey with the leading End-to-End Third-Party Risk Solution

At Panorays, our goal is to empower you to effectively and efficiently manage third-party security risks, enabling your organization to repurpose resources and accelerate business. We have invested significantly in ensuring that our implementation process is seamless, transparent and accompanied by a Panorays expert every step of the way.

Step 1

Experience Automated Third-Party Security Risk Management in Action

If you haven't already, we recommend scheduling a demo to see firsthand how Panorays will save you time and money by automating your third-party security risk program. After the demo, you'll be ready to apply Panorays to your business processes. We'll set up a proof of concept (POC) where you can upload up to 5 critical third parties and witness the transformation of the laborious manual process of third-party risk management into an efficient, thorough and scalable one.

Step 2

Choose the Right Option for You

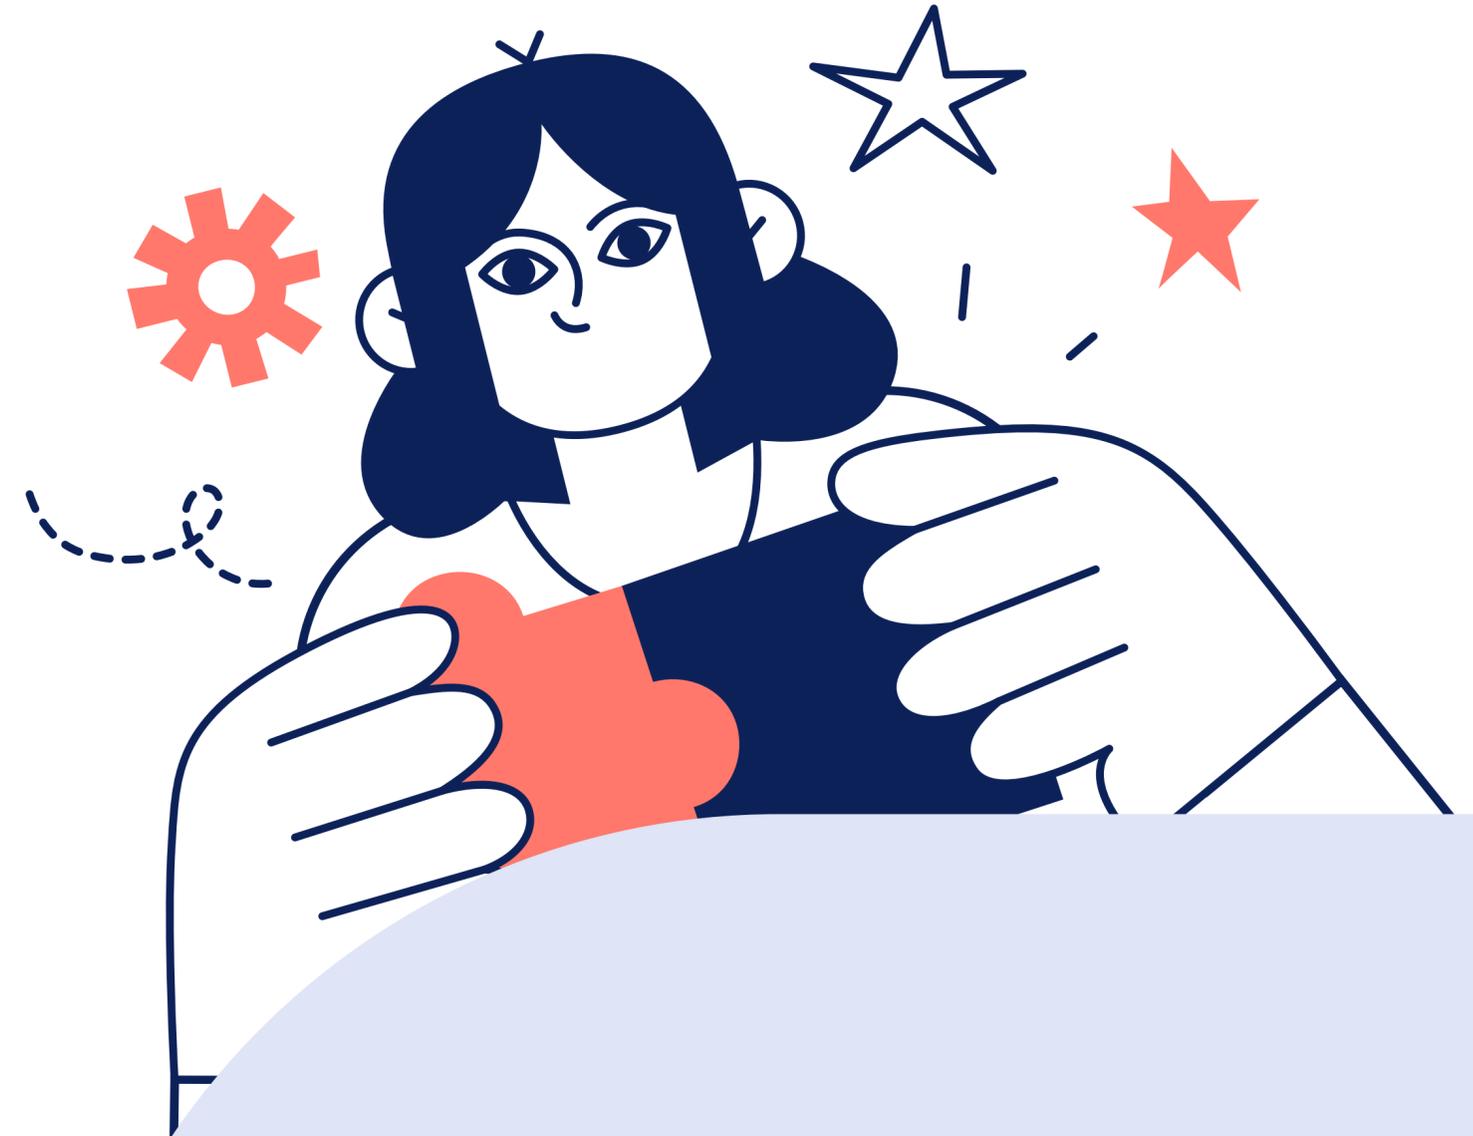

As every organization is unique, we offer a range of plans to ensure you get the best third-party security risk management tools that suit your needs and budget, providing you with the highest possible return on investment. Together, we'll determine the implementation timeline that works best for you and your team.

Step 3

Tailor Panorays to Your Requirements

All you need for immediate access to your cyber posture rating are the names and domains of your third parties. Your personal Customer Success Manager (CSM) will help get you started by setting up the most accurate and simple TPRM program for you right in the app. Your CSM will apply their experience and proven methodologies to optimize your Panorays program based on your specific use case, current challenges and goals. Your CSM will also help you prioritize your third parties based on their criticality to your business. They will implement automated workflows tailored to your needs, providing you with comprehensive visibility into your digital third-party ecosystem, while reducing the time and effort you spend on its management. If you have custom questionnaire templates used in spreadsheets in the past, your CSM will assist you in implementing them into your Panorays workflows so you can use them on your own going forward. You can also adjust the weights of questionnaires and the weight ratio between cyber posture ratings and questionnaires based on your internal policies.

Step 4

Take Control of Your Third-Party Security

With Panorays' intuitive, efficient and time-saving platform, you can scale your vendor risk management program with confidence. With Panorays you will:

- Accelerate your third-party security evaluation process significantly
- Eliminate the tedium of manual vendor questionnaires
- Review comprehensive security ratings with industry-leading accuracy
- Streamline collaboration and remediation with third parties
- Gain continuous, deep visibility into evolving supplier risk
- Ensure vendor compliance with regulations and your organization's internal policies

How Panorays Will Help

Companies using Panorays quickly experience increased speed and strengthened accuracy in their third-party security evaluation process. Panorays combines automated questionnaires with objective cyber risk assessments (SRS) and inherent risk, providing a rapid, thumbs-up-or-down view of supplier cyber risk.

Panorays is a SaaS-based platform that requires no installation and seamlessly integrates into existing organizational workflows, including GRC. It is trusted by global organizations across various industries, such as financial, insurance, healthcare, manufacturing and technology.
